

Tribo Bahia Mirim Capoeira Practice Platform

Project Brief & Technical Specification

1. Project Context & Philosophy

This project integrates capoeira practice infrastructure into the Agroverse ecosystem, connecting the martial arts lineage of Baia Itacaré with the regenerative cacao supply chain. The site serves two functions: a functional training tool for solo practitioners, and a community fundraising mechanism for Tribo Bahia Mirim's after-school program.

Pedagogical Foundation

Training under Bico Duro emphasizes precision on individual movements rather than flow-chaining or combinations. Each move is practiced to mastery before progression. Sessions are structured by thematic focus (Foundation, Defense, Attacks, Flow, Aerials, Floreios), with music serving as both the pacing mechanism and the timer. A typical solo session lasts approximately 45 minutes and includes 4 to 6 moves depending on depth of practice.

Integrated Practice Model

This project mirrors the Shaolin temple structure — contemplative practice (oracle.truesight.me) and embodied practice (capoeira.agroverse.shop) are complementary halves of a values-aligned worldview, not separate initiatives.

2. Site Architecture

Primary Location: capoeira.agroverse.shop

Transparency Dashboard: mirim-bahia.truesight.me (separate, linked from primary site)

Core Pages:

- **Landing Page:** What this project is, who Bico Duro is, what Tribo Bahia Mirim does, donation call-to-action
- **Practice Library:** Organized move index (searchable, filterable by theme and difficulty)
- **Session Generator:** "Start Your Practice" interface
- **Transparency Page:** Monthly donation inflows, Stripe fees, net outflow to Bico Duro and program (pulled from treasury-cache)

3. Data Structures

moves.json — each move object contains:

- **id:** Unique identifier (e.g., "ginga_basic", "esquiva_lateral")
- **name_pt:** Portuguese name
- **name_en:** English name / description
- **theme:** One of [Foundation, Defense, Attacks, Flow, Aerials, Floreios]
- **difficulty:** [Beginner, Intermediate, Advanced]
- **duration_minutes:** Estimated time to practice deeply (typically 15–25 min)
- **youtube_clip_url:** Direct link to individual move demonstration video (Bico Duro footage)
- **tempo_range:** [Slow, Medium, Fast] — matches music library BPM
- **notes:** Pedagogical notes, common mistakes, progression cues
- **pairs_well_with:** Array of move IDs (optional, for reference only)

music_library.json — each track object contains:

- **id:** Unique identifier
- **title:** Track name / description
- **youtube_url:** YouTube link to capoeira music
- **duration_seconds:** Length of track
- **bpm:** Beats per minute (approximate)
- **tempo_category:** [Slow, Medium, Fast]
- **style_notes:** Berimbau-heavy, drums-focused, etc.

session_history.json — stored client-side or server-side, persisted per user:

- **date:** ISO 8601 timestamp
- **theme:** Theme used for that session
- **moves:** Array of move IDs practiced
- **duration_minutes:** Total time spent

4. Core Features

4.1 Session Generator

- User lands on "Start Your Practice" interface
- Generator checks session history (last 3–4 sessions)
- Generator randomly selects a theme, avoiding repetition from recent sessions
- Generator selects 4–6 moves from that theme, weighted by difficulty, duration (target ~45 min total), and recency

- Generator selects music tracks matching the theme's tempo arc (slow intro, medium-fast mid-session, optional cool-down)
- Output: Session card showing theme, move list, music tracks in order, estimated total time

4.2 Practice Session Flow

- User clicks "Start Session"
- Interface displays first move with: name (PT + EN), embedded YouTube clip of Bico Duro, pedagogical notes, timer showing music track duration
- User clicks "Play Music" — music starts (YouTube embed or external player)
- User practices move while music plays
- When music ends, user sees "Rest" prompt and next move prepares
- Process repeats for each move in session
- After final move, session ends with option to log the session

4.3 Session History & Analytics (optional, nice-to-have)

- Sessions completed this week
- Themes practiced (frequency breakdown)
- Moves most / least practiced
- Streak counter (days in a row practicing)
- Stored locally in browser (localStorage) unless backend is added later

4.4 Move Library

- Searchable / filterable index of all moves
- Filter by: theme, difficulty, tempo
- Each move card shows: name (PT + EN), embedded video, theme, difficulty, duration, tempo, pedagogical notes
- Optional: "add to custom session" advanced feature

4.5 Donation & Transparency

- Prominent donation button on landing page and in footer
- Links to Stripe checkout (configured to accept donations)
- Post-donation: confirmation + link to transparency dashboard
- Transparency dashboard pulls from treasury-cache JSON (same ledger system as TrueSight DAO)
- Shows monthly table: date range, total inflow, Stripe fees deducted, net outflow to program

5. Music Library (Initial Curation)

Twelve capoeira tracks curated by Gary, tagged by tempo and style. Suggested mix:

- 3–4 slow berimbau tracks (Foundation, warm-up)
- 4–5 medium-tempo drum-heavy tracks (Defense, Attacks)
- 2–3 fast, energetic tracks (Aerials, Floreios, finishes)

Each track sourced from YouTube, duration noted, BPM estimated.

6. Move List (To Be Populated)

Extracted from individual video clips already filmed by Gary of Bico Duro demonstrating each move. Organized by theme:

- **Foundation:** Ginga variations, basic footwork, grounding moves
- **Defense:** Esquivas, evasions, read-and-respond movements
- **Attacks:** Golpes, front kicks, spinning kicks, directional power
- **Flow:** Sequences combining multiple moves, transitions
- **Aerials:** Queda, flips, inversions, advanced techniques
- **Floreios:** Style moves, expression, flashy elements

Estimated 30–50 moves total, to be cataloged and tagged.

7. Implementation Roadmap

Phase 1: Data Preparation

- Catalog all individual move clips (title, theme, duration, pedagogy notes)
- Tag twelve curated music tracks (BPM, tempo category, style)
- Create moves.json and music_library.json

Phase 2: Core Site Build

- Static site scaffold (HTML/CSS/JS)
- Landing page with narrative framing, donation button, navigation
- Move library page (searchable index)
- Session generator logic (theme selection, move selection, music sequencing)
- Session practice interface (video embed, music player, move progression, timer)

Phase 3: Persistence & Analytics

- Client-side session history storage (localStorage)
- Simple session logging / streak counter
- (Optional) backend persistence if needed later

Phase 4: Donation & Ledger Integration

- Stripe integration (donations)
- Manual monthly reconciliation: Stripe CSV → Google Sheet → treasury-cache JSON
- Transparency dashboard (mirim-bahia.truesight.me) pulling from treasury-cache

8. Technical Notes

- **Frontend:** Static HTML/CSS/JavaScript (no backend required for MVP)
- **Data:** JSON files (moves.json, music_library.json) stored in repo or CDN
- **Video Hosting:** Individual move clips already filmed; embed via YouTube unlisted or public links
- **Music:** YouTube links (free capoeira music sourced and curated)
- **Donations:** Stripe API for checkout; webhooks optional (manual reconciliation fine for initial phase)
- **Transparency Ledger:** Pulls from existing TrueSight DAO treasury-cache (Google Sheets → Apps Script → GitHub JSON)
- **Deployment:** Static site hosting (Vercel, Netlify, or simple VPS)

9. Revenue Structure

- 100% of donations (minus Stripe fees: 2.2% + \$0.30 per transaction) flow to Bico Duro and Tribo Bahia Mirim
- No TrueSight DAO cut
- Monthly Stripe settlements → Gary's U.S. bank account → converted to Pix → transferred to Bico Duro
- Monthly summary email to Bico Duro showing inflows, fees, net
- Public transparency dashboard showing same data

10. Narrative Framing & Messaging

For the site:

"Tribo Bahia Mirim teaches capoeira to the children of Baia Itacaré — a place where our cacao comes from. Practice with us, and support the program that shapes the community. Every donation, minus processing fees, goes directly to Bico Duro and the kids."

For Agroverse integration:

The Baia Itacaré page on Agroverse dot shop links to the practice platform: "Learn the martial arts of the place where our chocolate comes from."

For TrueSight transparency:

"This is how your support flows: donations → ledger → the people who need it. See every transaction."

11. Next Steps

1. Confirm with Bico Duro: revenue split, any program updates to feature, comfort level with public video
2. Catalog move clips and create moves.json (theme, duration, pedagogy notes)

3. Curate and tag twelve music tracks
4. Draft site copy and landing page narrative
5. Hand off to Claude Code or developer for implementation
